

Which small water heater?

Choose unvented units for multiple outlets. Vented units must be used with special taps and are suitable for one outlet.
Note: All our 5-15 litre unvented units are supplied with a pressure relief valve - see next diagram to determine if you need an additional pressure kit (supplied as standard to 30 & 50 litre models).

- Choose 5 litre models for a basin. The t ECO model features an onboard controller/timer
- Choose 10 litre models or the SNE 5 t ECO for 2 basins or a kitchen sink (SNE 5 t ECO can store water at higher temps than other 5 litre models for greater mixed volume)
- Choose 15 litres for high usage sinks or up to 3 basins
- Choose 30 litres + for cleaners' sinks, light commercial

STIEBEL ELTRON

Do I need an additional pressure kit for my unvented water heater?

An additional kit is needed if you do not have sufficient pipe between heater and outlet. The diagram below shows the minimum 15mm pipe length required. If you do not have this choose the unvented kit indicated for your size of heater below.
