

EZE

PRODUCT-NO.: 237737

This product is the base station for the EASYTRON individual room control system. It enables room temperature capture and preferred temperature delivery in each living space.

Other EASYTRON components are connected to the control unit. Which combination of components is connected depends on the application. Smart thermostats are available for connection to radiators, wireless sensors for capturing room temperature and heating controllers for controlling actuators in underfloor heating systems.

Until now, the individual room controls on the market have generally offered little or no opportunity to directly influence the heat generator, e.g. a heat pump. The EASYTRON individual room control system responds optimally to different operating conditions, such as defrosting. An EASYTRON Connect individual room control system is therefore the ideal supplement to the heat pump controller.

It can be used both for water-based underfloor heating systems and for radiator-based central heating and increases comfort significantly.

Individual components communicate with each other wirelessly. An app (iOS® and Android®) is used to operate the system.

The main features

Central base station for the EASYTRON Connect individual room control system

Preferred temperature adjustable in each room

Can be operated from anywhere at any time via free iOS and Android app

Economy functions such as holiday and time programs

Type	EZE
Part no.	237737

Technical data

Installation type	Floor mounted appliance
Colour	white
USB	2
10/100 Ethernet	RJ45
WLAN	802.11 b/g/n
Z-Wave radio	868.42 MHz
Power supply, power supply unit	1/N ~ 230 V 50 Hz
Supply voltage	5 V
Power consumption	5 W
Operating temperature range	0...+50 °C
Width	124 mm
Height	124 mm
Depth	28 mm
Weight	0.17 kg
Storage and transportation temperature	-20...+60 °C

The end customer connection (or that of the internet service provider) must support all standard network technologies (in particular a public IP v4 address). Observe the compatibility list.
