

# LWF AR 1.5

ACCESSORIES

PRODUCT-NO.: 204818

## Optimise your enjoyment of fresh air

Air from the outside is fresh and rich in oxygen, but its temperature varies depending on the time of day and season. This air reheater is the ideal addition to ensure that your mechanical ventilation simply keeps temperatures comfortable at all times. It warms the supply air and thereby supports your heating system.

## Create simple combinations

Regardless of whether you use only a central ventilation unit, an integral ventilation unit or a ventilation unit together with a heating heat pump – the air reheater can be easily combined with them all. Your installer will take care of this for you. If your heat pump is equipped with a cooling function, the air reheater can also be used for energy efficient post-cooling of the supply air.

## The main features

Air reheater for energy efficient heating of the supply air

---

If the heat pump has a cooling function, the supply air can be post-cooled in the summer

---

Significantly higher living comfort as the supply air is brought up to room temperature

---

Compact EPP casing is suitable for wall and ceiling mounting
